- 12 The first column in `/etc/fstab` allows to specify the storage device to be mounted. The device can be expressed in different ways. For local block storage devices, the alternatives of Kernel-assigned device node name, label, and UUID got discussed. For each of the three alternatives, provide an example value as could be found in the first column of `/etc/fstab` and discuss the properties, advantages, and disadvantages of each.

Write your answer in the box below. Changes are saved automatically.
